

Business Analyst (F/M/X)

What will you do ?

Your role will be to analyze the project needs: business requirements, IT tools... You will also supervise the IT team and be the point of contact of all departments involved in the project.

Your daily activities will be:

- Collect and analyze the client's needs
- Identify, communicate and document the business requirements
- Organize and lead workshops/train users to facilitate the change management
- Coordinate work and communication within all stakeholders

What are your skills?

- You have experience in: UML, BPMN, SQL tools. Preferable: Having experience in .Net, Java, Javascript and HTML languages.
- Your structured and organized way of working allows you to communicate clearly and concisely.
- You have very good relationship skills, allowing you to build strong relationships with all members of a project.
- You have at least 2 years of relevant experience. You also speak French and English fluently. Speaking Dutch would be an asset.
